

Generative Text {AI} workshop

1a. *Read through & markup the excerpt from: “Initial Guidance of Evaluating the Use of AI in Scholarship and Creativity”*. Add some of your initial thoughts here.*

1b. *Do you think these 6 characteristics are the same for design? Are there any that you would add or remove? Why?*

1c. *What happens if you read the excerpt aloud and swap out some keywords? eg: “AI” for “computer algorithm” or “writing” for “design”? Note down anything you discover here.*

2. *Identify technologies that already “automate” or augment information search. Where are they found? eg. autoselect tools in image editing software.*

3. *Step 4: How would you describe your relationship with technology? What do you use technology for in your own design practice? How do you see yourself integrating into a technological ecosystem? You might need to define technology to do this.*

4a.*Ask a large Language Model of your choice for what these 6 characteristics (of purposeful and responsible use of AI) could be from a design perspective.*

a. prompts

4b.*We encourage you to not simply take the generated answers as what these should be but to consider whether you agree with what chatGPT returns?*

b. responses

5. *Where do you think key terms in chatGPT’s response come from? Consider using a search engine to see what comes up when you search these terms? Can you find them used in similar contexts?*

6. *Ask GPT for attribution of what it has produced - “Can you provide a reference for that please?” You can also check this reference actually exists.*

7. *Now with your working group write your own list of characteristics - use all of your thinking above to do this. Rank and compare to 1B.*
